

North Carolina Landmarks Project

Name _____

You will create a resource (Google Slide) that highlights some of NC landmarks. You will use multiplicative comparisons to help other students visualize landmark sizes.

For example, the Cape Hatteras Lighthouse is 187 feet tall, that is about _____ times taller than an average adult male!

Your resource must include pictures of the landmark and specific measures(height, weight or length). You must include at least 5 landmarks!

Questions to think about:

- Which landmarks will I choose?
- How will you organize your information?
- Which multiplicative comparisons will I use? Use objects other students will be familiar with (school bus, car, person, animal).

My five landmarks are:

1)

2)

3)

4)

5)
